Functional Movement Patterns Super Reliable Rehabilitation

Key Benefits

- Abilities patients
- Bariatric patients
- Orthopedic patients
- Strokes
- Back problems
- Gait training
- Cardiovascular
- Respiratory ailments
- Neurological patients
- Safety

Analog Control Panel

Easy to read, easy to use analog control allows precise unweighting from 0 to 300 lbs. in 1 lb. increments. Features balance and exercise modes in familiar dial format.

"The PneuTread Unweighting system has contributed greatly to our patient's rehabilitation and recovery. Many of them have decreased their gait deviations, have improved overall strength and endurance, and feel more confident in their abilities."

Stacy Cole, PT

"The PneuTread is the most versatile piece of equipment I have. I have used it for pre and post prosthetic training, on a balance patient and patients with various gait challenges. Unweighting allows patients to perform activities without a tremendous amount of compensatory strategies stimulating a more normal movement pattern." Jonny Galver MPT
